

From the idea to the finished product

Electronic Manufacturing Services

We manufacture your electronics – from the idea to the finished product!

From material procurement and consultation for the circuit board layout to assembly operations and/or functional tests: We produce your components exactly as specified by the data you provide, while taking account of the currently valid IPC guidelines.

A TRIMBLE COMPANY

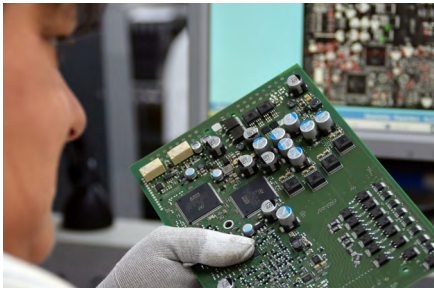

In our fully air-conditioned production facilities, we manufacture your products to meet the highest quality requirements.

With assembly lines from the SIPLACE series, reflow systems from ERSÄ, and our in-line AOI from VISCOM, we guarantee a swift and smooth production process. Our VERSAFLOW also promises high-precision soldering.

Regular employee training allows us to guarantee continuous perfect workmanship – both for automated and conventional manual assembly.

In the areas of circuit board coating and production technology, we work closely with qualified partners from our region.

Within the scope of full project monitoring, we stand by your side with advice and support.

Our customers include big names of the industry, e.g. from the agricultural, automation and automotive sectors as well as from medical technology.

An overview of our services:

- Prototype and initial sample assembly
- Assembly of small and large series
- SMD assembly (Siplace SX series, with long board option bis 850 mm, with shielding gas)
- THT assembly
- Component testing with AOI
- Selective soldering
- Worldwide material procurement
- 100% project monitoring
- Traceability
- Certified according to DIN EN ISO 9001:2015
